dada una función peso positiva w soportada en un intervalo real existe una única sucesión salvo diferentes normalizaciones de polinomios p_n de grado n en tal que $\int_{-1}^1 p_n(x) p_m(x) w(x) dx = \delta_{nm}$ y asociada a estos polinomios se define la entropía como $-\int_{-1}^1 p_n^2(x) w(x) dx \log p_n^2(x) w(x) dx$ este concepto resulta de gran importancia al estudiar algunos sistemas mecano cuánticos como el átomo de hidrógeno o el oscilador armónico pero también es importante por su relación con la teoría del potencial logarítmico así como con la propia teoría de polinomios ortogonales sobre esta entropía se estudian básicamente dos tipos de problemas el primero consiste en obtener los términos asintóticos de h_n cuando $n \rightarrow \infty$ el segundo problema es el de obtener fórmulas explícitas para h_n o ya que esto resulta casi imposible obtener métodos para calcular o aproximar h_n en el problema asintótico se obtiene el tercer término para la entropía de los polinomios de gegenbauer de parámetro entero siendo al parecer este el primer caso no trivial en el que se consigue la asintótica hasta tal término en el caso de soporte acotado otra familia de polinomios interesante es la de los polinomios de pollaczek que no pertenecen a la clase de szego y por tanto su entropía es asintóticamente divergente para estos polinomios se obtiene en el caso simétrico con parámetro principal 1 la asintótica de h_n hasta el término $o(1)$ en el problema de cálculo explícito se extienden unas fórmulas conocidas para la entropía de los polinomios de gegenbauer de parámetro entero a la familia de polinomios de jacobi para los parámetros $m_1, m_2 \geq 1$ con m_1, m_2 enteros positivos también se da un método efectivo para el cálculo de la entropía de polinomios ortogonales en un intervalo acotado de la recta real que usa como únicos datos de entrada los coeficientes de la relación de recurrencia que satisfacen este algoritmo está basado en una representación en serie para la energía mutua de dos medidas de probabilidad conectadas de forma natural con los polinomios se estudia en detalle el caso particular de los polinomios

de gegenbauer estos resultados son aplicados también al cálculo de la entropía de las funciones esféricas armónicas importantes para el estudio de las relaciones de incertidumbre como en el caso de la parte espacial de las funciones de onda de sistemas mecano cuánticos en potenciales centrales
